

Launch Week Release Overview

for Early Access & General Availability (October 2025 – March 2026)

These materials and any recommendations within are not legal, privacy, security, compliance, or business advice. These materials are intended for general informational purposes only and may not reflect the most current security, privacy, and legal developments nor all relevant issues. You are responsible for obtaining legal, security, privacy, compliance, or business advice from your own lawyer or other professional advisor and should not rely on the recommendations herein. Okta is not liable to you for any loss or damages that may result from your implementation of any recommendations in these materials. Okta makes no representations, warranties, or other assurances regarding the content of these materials. Information regarding Okta's contractual assurances to its customers can be found at okta.com/agreements.

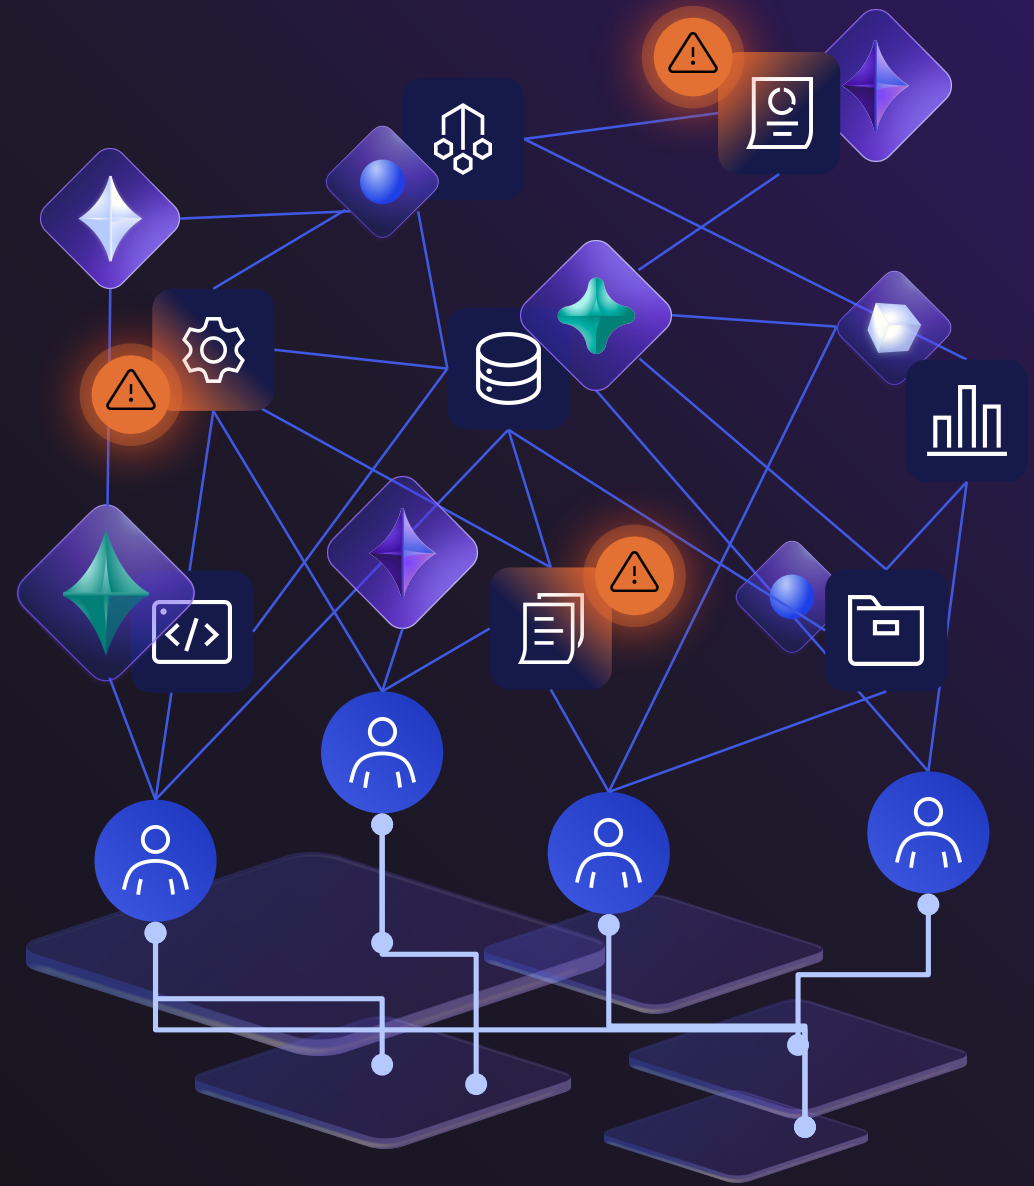

Safe harbor

This presentation contains "forward-looking statements" within the meaning of the "safe harbor" provisions of the Private Securities Litigation Reform Act of 1995, including but not limited to, statements regarding our financial outlook, business strategy and plans, market trends and market size, opportunities and positioning. These forward-looking statements are based on current expectations, estimates, forecasts and projections. Words such as "expect," "anticipate," "should," "believe," "hope," "target," "project," "goals," "estimate," "potential," "predict," "may," "will," "might," "could," "intend," "shall" and variations of these terms and similar expressions are intended to identify these forward-looking statements, although not all forward-looking statements contain these identifying words. Forward-looking statements are subject to a number of risks and uncertainties, many of which involve factors or circumstances that are beyond our control. For example, global economic conditions have in the past and could in the future reduce demand for our products; we and our third-party service providers have in the past and could in the future experience cybersecurity incidents; we may be unable to manage or sustain the level of growth that our business has experienced in prior periods; our financial resources may not be sufficient to maintain or improve our competitive position; we may be unable to attract new customers, or retain or sell additional products to existing customers;

customer growth has slowed in recent periods and could continue to decelerate in the future; we could experience interruptions or performance problems associated with our technology, including a service outage; we and our third-party service providers have failed, or were perceived as having failed, to fully comply with various privacy and security provisions to which we are subject, and similar incidents could occur in the future; we may not achieve expected synergies and efficiencies of operations from recent acquisitions or business combinations, and we may not be able to successfully integrate the companies we acquire; and we may not be able to pay off our convertible senior notes when due. Further information on potential factors that could affect our financial results is included in our most recent Quarterly Report on Form 10-Q and our other filings with the Securities and Exchange Commission. The forward-looking statements included in this presentation represent our views only as of the date of this presentation and we assume no obligation and do not intend to update these forward-looking statements.

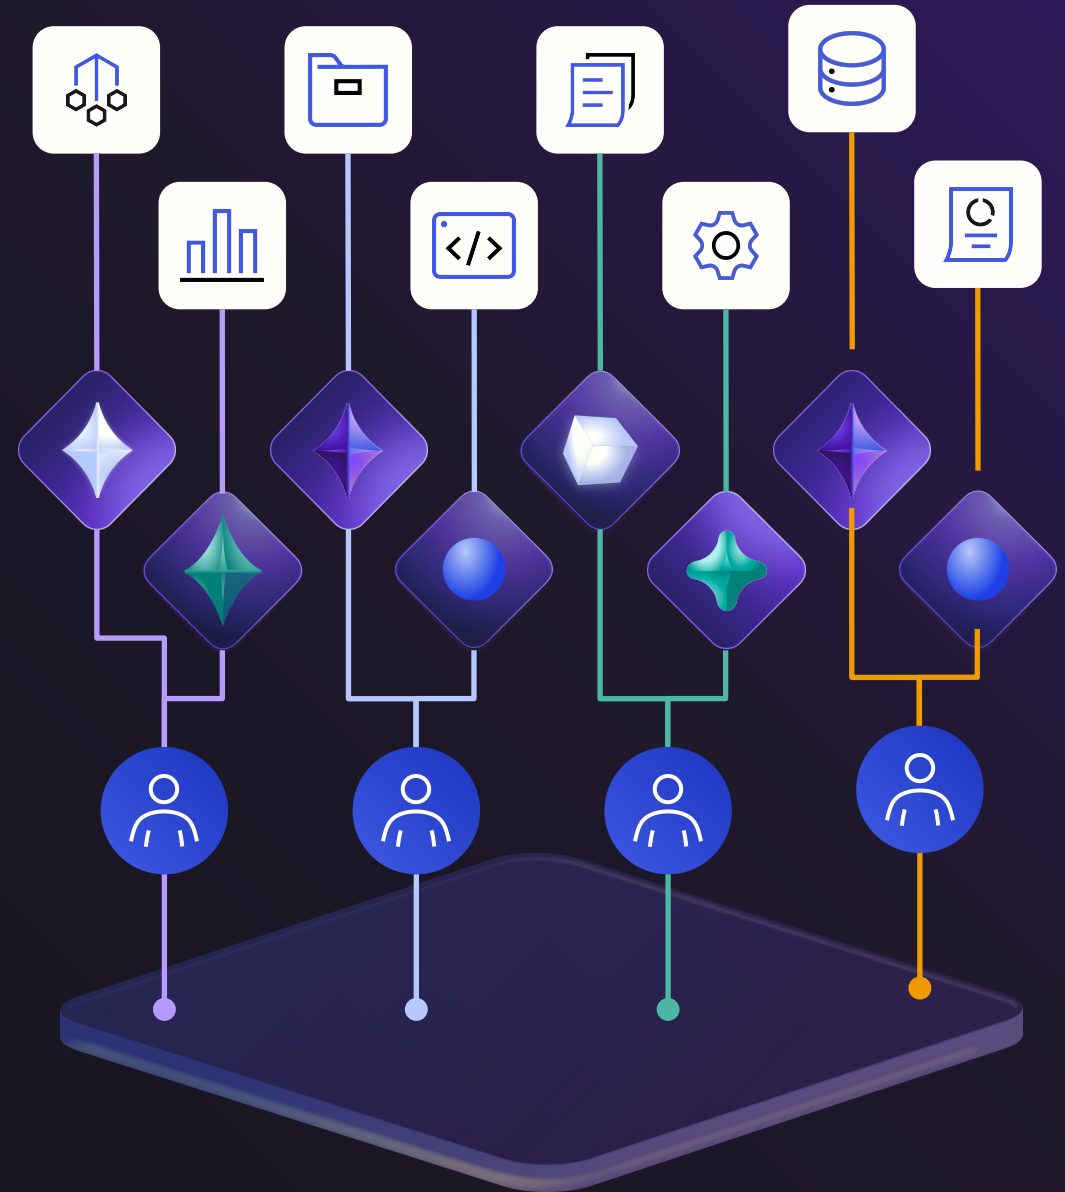

Any products, features, functionalities, certifications, authorizations, or attestations referenced in this presentation that are not currently generally available or have not yet been obtained or are not currently maintained may not be delivered or obtained on time or at all. Product roadmaps do not represent a commitment, obligation or promise to deliver any product, feature, functionality, certification or attestation and you should not rely on them to make your purchase decisions.

Auth0

To get security, experience, and AI right you have to get identity right.

Auth0 is the Customer Identity Platform built for the AI era. With Auth0, we handle the complexity of identity – whether human or AI, so you can move fast and innovate boldly.

This quarter's releases empower builders with:

- A solution for securing your AI-ready apps
- New ways to deliver seamless experiences for consumers and B2B scenarios
- More layered defenses to tackle risk
- Expanded extensibility for more control

Spotlights

- Auth0 for AI Agents advancements
- Tenancy-as-a-Service

All features

- AI Agents
- Authentication
- Authentication — SaaS Apps
- Authorization
- Security
- Platform

Developer resources

Auth0 Platform: Create great experiences, with Security built in.

Secure Experience

Before Login – Unknown Customer

- Progressive Profiling
- Breached Password Detection
- Bot Detection
- SCIM

At Login – Known Customer

- Passwordless
- Universal Login
- Adaptive MFA
- Social Login
- Organizations

After Login – Repeat, Trusted Customer

- Fine Grained Authorization
- Secure APIs
- Highly Regulated Identity
- Universal Logout
- Continuous Session Protection

Spotlight: Auth0 for AI Agents advancements

Make your products "AI-ready"

What is it?

Auth for MCP: As the Model Context Protocol (MCP) becomes the standard for connecting products to the AI ecosystem, Auth0 helps ensure security isn't an afterthought. We apply identity principles to authenticate and authorize every MCP client call, protecting your resources from unauthorized agent access.

Customer Challenge:

With the AI ecosystem expanding rapidly, you need a seamless and scalable way to give AI agents access to *your* products and internal apps, too. Using MCP introduces a new identity type to your APIs —MCP clients. They need to be authenticated and authorized like any identity.

Auth for MCP helps secure the entire flow: authenticating users into the MCP server, and granting the server scoped, time-bound API access on the user's behalf.

Why this matters

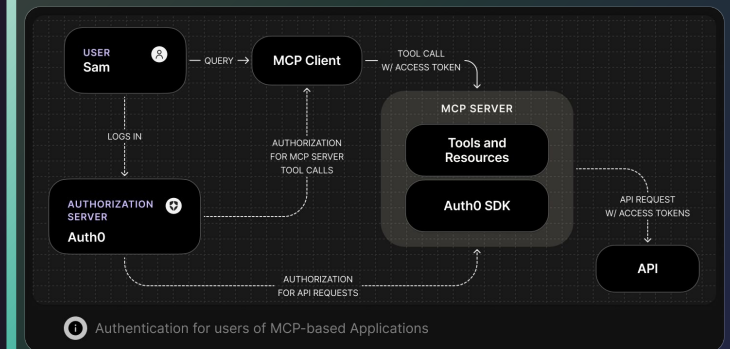

Auth0 helps you make security the default foundation for your AI innovation, so you can move fast without taking on undue risk.

Auth for MCP key benefits:

- **Standardize Data Access securely:** Connect agents to any system using the MCP standard, eliminating the security gaps of fragmented, "one-off" integrations.
- **End "Shadow AI":** Transform rogue agents into managed identities with granular, least-privilege access to corporate resources.
- **Guarantee Auditability:** Create identity-bound trails for every agent interaction, making your AI workflows fully compliant and transparent.

How to get it

- Ready to start building? Explore our [quickstarts](#), [how-tos](#), and [SDKs](#) in the Auth0 for AI Agents documentation.

Spotlight: Tenancy-as-a-Service

Stop building identity plumbing and start closing enterprise deals.

What is it?

Moving upmarket is essential for growth, but building and scaling identity for enterprises drains engineering resources, introduces security risks, accumulates tech debt overtime, and ultimately slows down your sales cycle.

Tenancy-as-a-Service enables SaaS companies to easily ship enterprise-ready identity, so they can start selling fast.

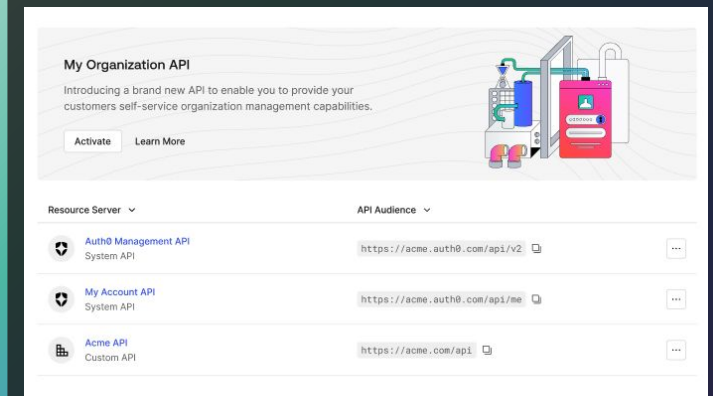

With built-in multi-tenancy, self-service enterprise SSO & provisioning, and My Organization API for rapidly deploying in-app admin functions, you can give enterprise customers exactly what they expect, quickly and securely, without overwhelming your dev teams.

Why this matters

- **Scale with confidence.** Auth0's multi-tenancy model provides a more secure identity foundation to grow and manage customers at scale, without operational overhead.
- **Onboard new customers in days, not months,** with rapid enterprise SSO and provisioning through an all-in-one, self-service workflow.
- **Ship faster** using a full library of modular, white-labeled components, powered by My Organization API for in-app admin experiences, freeing developer teams to focus on innovation.

How to get it

Sign up [here](#) to start building with Auth0 and take advantage of Auth0's Tenancy-as-a-Service features.

Auth0 Releases

Auth0 puts security first without sacrificing user experience. It helps organizations adopt technologies that drive growth and offers tools to navigate evolving security threats, protecting both customer and business data.

Learn more about our new Auth0 capabilities released in Q4 2025 and Q1 2026.

AI Agents

Early Access

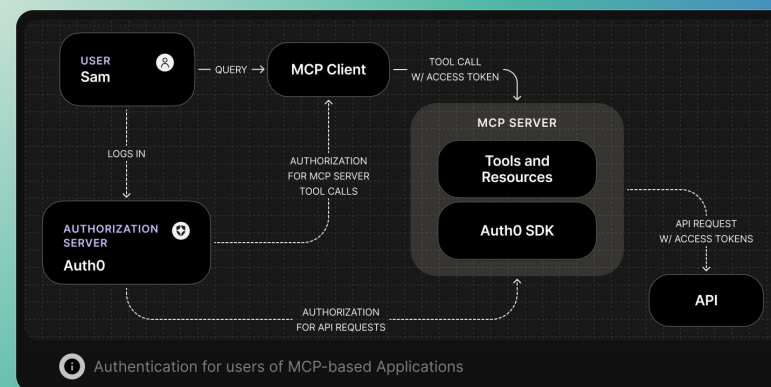

Auth for MCP

Feature of: Auth0 / Available in: All Plans

Enhance security for MCP clients and servers with Auth0 using OAuth 2.1 and OpenID Connect for user authentication, controlled API access, and scoped token exchange.

[Learn more](#)

[Learn more](#)

Auth for MCP

Authentication – Consumer Apps

General Availability

Advanced Customization for Universal Login (ACUL)

Feature of: Auth0 / Available in: Essentials & above

Enables you to build custom, client-rendered interfaces for Universal Login screens. Use your design system, tooling, and existing investments in UI/UX on top of Auth0's hosted authentication platform.

[Learn more](#)

Native to Web SSO

Feature of: Auth0 / Available in: Enterprise

Enables seamless authentication between native mobile apps and web apps, eliminating the need for users to re-enter credentials when switching between them.

[Learn more](#)

Right-to-Left (RTL) Language Support for Universal Login

Feature of: Auth0 / Available in: All plans

Expands Auth0's global accessibility by enabling seamless support for RTL languages, including Arabic, Persian (Farsi), Hebrew, and Urdu—helping you deliver more inclusive, intuitive login experiences.

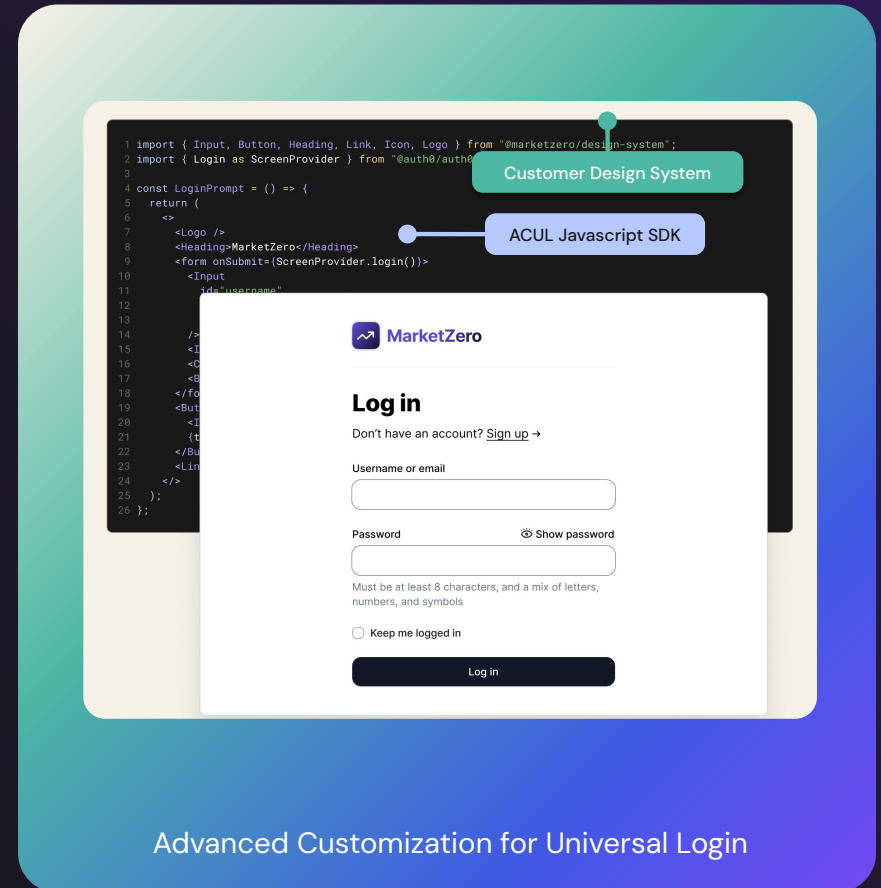

[Learn more](#)

Multiple Custom Domains (MCD)

Feature of: Auth0 / Available in: Up to 20 domains per tenant on enterprise, separate add-on for more

MCD allows you to deliver tailored, branded experiences for users including customized login URLs and emails, while enhancing security through use of custom domains across end-user interactions.

[Learn more](#)

Authentication – Consumer Apps

General Availability

Native Passkey Enrollment with My Account

Feature of: Auth0 / Available in: All plans

Native Passkey Enrollment enables users to add a passkey to their account using APIs; applications can fully manage user onboarding of passkeys.

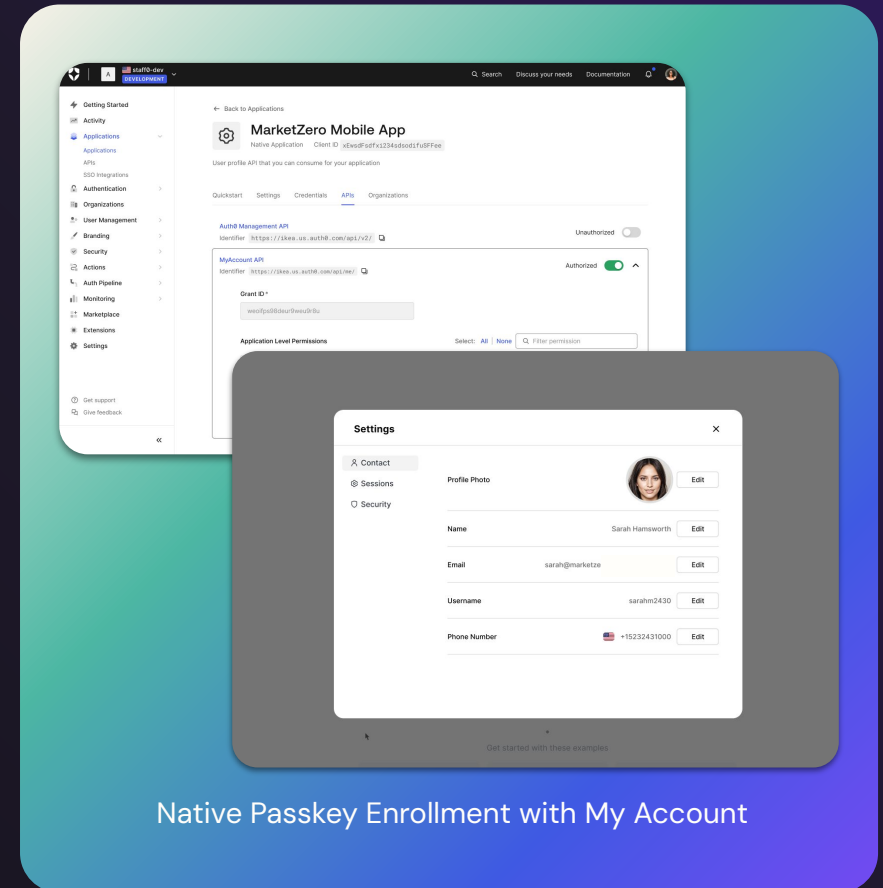

[Learn more](#)

Custom Prompts – Dashboard UI, Passkey and Custom Database Support

Feature of: Auth0 / Available in: All plans

Allow custom prompt partials to be configured in the Auth0 Admin dashboard. Surface additional data captured during Login and Signup when using Passkeys and in custom database scripts.

[Learn more](#)

Native Passkey Enrollment with My Account

Authentication – Consumer Apps

Early Access

Passwordless Authentication on DB Connections

Feature of: Auth0 / Available in: All plans

Users log in using one-time codes sent by email or SMS without needing to set or remember a password. Works natively within Auth0's standard database connections, alongside other methods like passkeys or traditional credentials, with no extra configuration.

[Learn more](#)

Passkey Login for Custom Databases With Import Mode Off

Feature of: Auth0 / Available in: All plans

Enables customers to use passkeys as the primary authentication mechanism without having to import users into the Auth0 database. Auth0 Databases and Auth0 Custom Databases with import mode ON are already supported.

[Learn more](#)

Custom Token Exchange

Feature of: Auth0 / Available in: All plans

OAuth 2.0 Token Exchange allows trading one security token for another (usually an Access Token). Use Auth0 Actions during this exchange to inject custom logic, implement authentication/authorization semantics, validate and authorize the request, and set the user for each transaction.

[Learn more](#)

Authentication – SaaS Apps

General Availability

Google Workspace User Directory Sync

Feature of: Auth0 / Available in: All Plans

Automatically provision and deprovision users from organizations that use Google Workspace as their workforce identity provider.

[Learn more](#)

Multiple Custom Domains

Feature of: Auth0 / Available in: All Plans

Use multiple custom domains per tenant to enable multiple brands (B2C) and SaaS white-labeling (B2B); support many different tailored, branded user experiences across channels.

[Learn more](#)

Self-Service SSO Template

Feature of: Auth0 / Available in: All Plans

Empower customers to configure IdPs independently using pre-built templates with step-by-step instructions and screenshot-based guidance for each IdP.

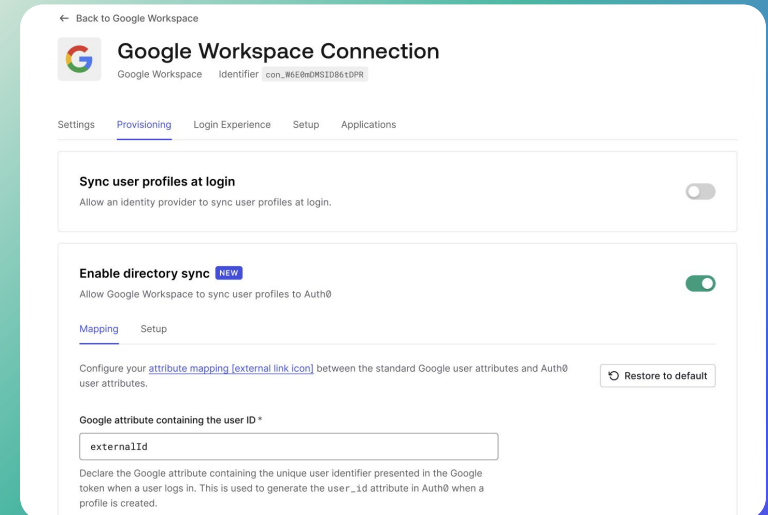

[Learn more](#)

Express Configuration

Feature of: Auth0 / Available in: All plans

Enable your customers using Okta to automate set up of SSO, SCIM, and Universal Logout with your application via the Okta Integration Network.

[Learn more](#)

Google Workspace User Directory Sync

Authentication — SaaS Apps

Early Access

My Organization API and Embeddable Components

Feature of: Auth0 / Available in: All plans

A self-service API that powers a set of components that SaaS companies can embed into their apps to provide in-app admin functions to their customers.

Self-Service Provisioning

Feature of: Auth0 / Available in: All plans

A ticket-based, user-friendly workflow that enables your business customers to quickly and confidently set up user provisioning on their own.

[Learn more](#)

Self-Service Domain Verification for Organization Discovery

Feature of: Auth0 / Available in: All plans

Organization Discovery by Domain fully integrated into the Self-Service SSO workflow, eliminating manual backend configuration and providing a seamless login experience for your enterprise users.

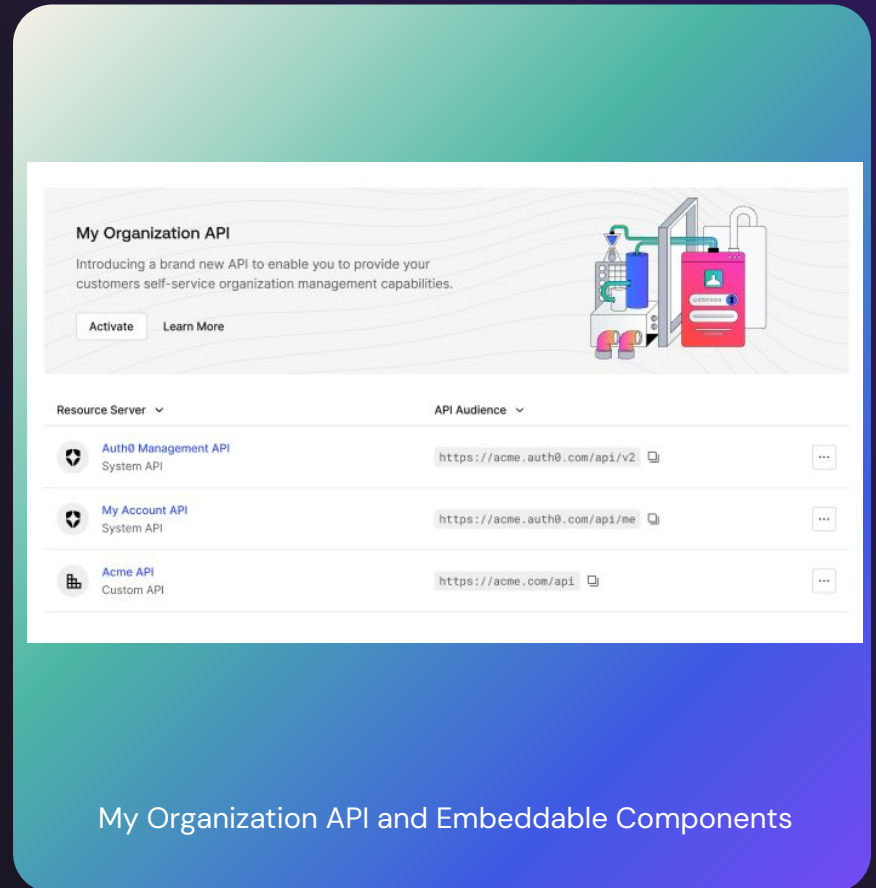

[Learn more](#)

Bulk User Import with Universal Custom Password Hash

Feature of: Auth0 / Available in: All plans

Allow customers to import users with any password hashing algorithm, so that end users don't need to reset their passwords after migration to Auth0.

[Learn more](#)

Fine-Grained Authorization

General Availability

FGA Logging API

Feature of: Auth0 / Available in: FGA

Brings your logs directly into the FGA Dashboard, eliminating the need for API clients and drastically reducing the time required to debug and troubleshoot authorization issues.

[Learn more](#)

Per-Member Authorization

Feature of: Auth0 / Available in: FGA

Provides granular access control, allowing you to assign specific permission levels to team members based on their needs.

[Learn more](#)

FGA Logging API

Security

General Availability

Advanced Filtering, Grouping in Security Center

Feature of: Auth0 / Available in: Attack Protection

Anomaly monitoring on expanded attack vectors in the Security Center dashboard through filter categories. List groupings of events by multiple categories for incident analysis.

[Learn more](#)

Enhanced Bot Detection Accuracy with JA4 Signals

Feature of: Auth0 / Available in: Attack Protection

To provide a more robust defense against sophisticated automated threats, Auth0 has integrated JA4 signals into the core of our Bot Detection machine learning engine.

[Learn more](#)

Enhanced Signup Bot Detection for Stronger Security and Seamless User Experience

Feature of: Auth0 / Available in: Attack Protection

Improved signup machine learning model delivers stronger protection against automated account creation. Includes expanded detection signals, smarter traffic classification, and optimized sensitivity settings.

[Learn more](#)

New Management API Endpoints to Configure Bot Detection Settings

Feature of: Auth0 / Available in: Attack Protection

Auth0 now provides Management API endpoints to manage Bot Detection configuration, configure bot detection controls, challenge policies, and CAPTCHA management.

[Learn more](#)

Advanced Filtering, Grouping in Security Center

Security

General Availability

Ephemeral Sessions with Actions

Feature of: Auth0 / Available in: Enterprise

You can now configure ephemeral (non-persistent) sessions using Actions. Enterprise customers can dynamically control if a session is stored in a persistent cookie or only in memory.

[Learn more](#)

Session Metadata in Actions

Feature of: Auth0 / Available in: Enterprise

You can now add and manage Session Metadata directly in Actions and the Auth0 Management API.

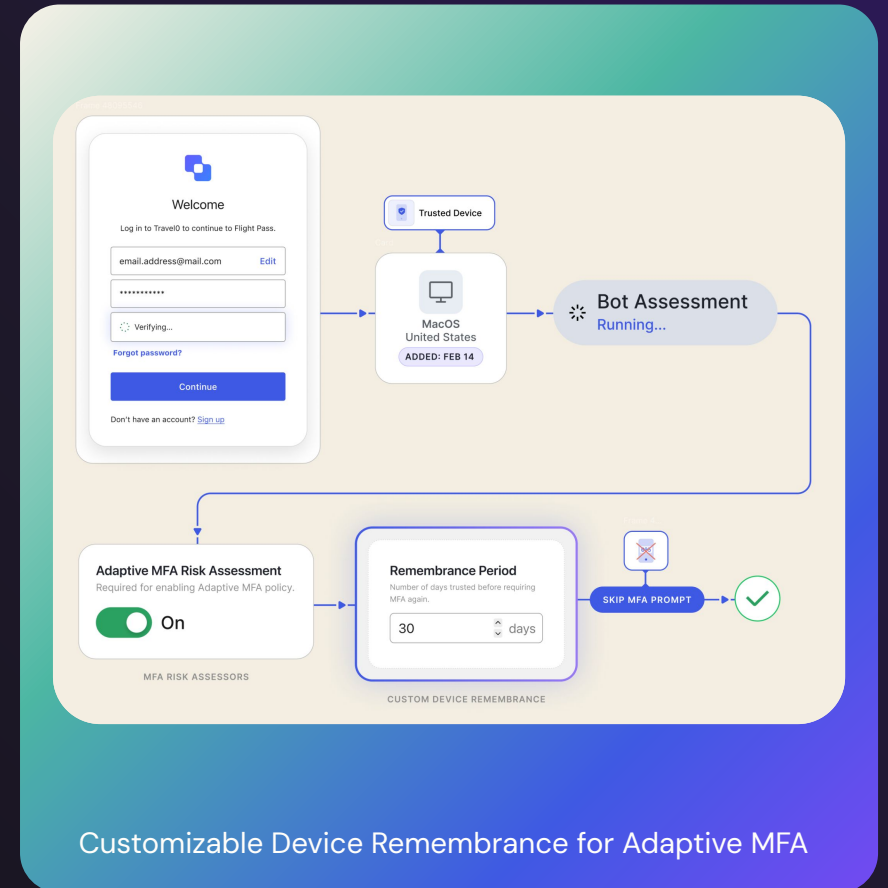

[Learn more](#)

Customizable Device Remembrance for Adaptive MFA

Feature of: Auth0 / Available in: Adaptive MFA

Adaptive MFA now allows administrators to configure device remembrance durations (TTL) for the New Device assessor. Default remains at 30 days, with customization available between 1–365 days.

[Learn more](#)

Platform

General Availability

New Private Cloud AWS Region in Thailand

Feature of: Auth0 / Available in: Enterprise

Customers in the region can now leverage this new presence for significantly reduced latency and enhanced performance. It also provides a robust, in-country solution for organizations managing their data governance and sovereignty objectives.

Private Cloud Performance 30x and 30x Burst (3,000 RPS) offering on Azure

Feature of: Auth0 / Available in: Auth0 - Private Performance Azure, Auth0 - Private Performance Burst Azure

The 3,000 RPS Private Performance and 3,000 RPS Private Performance Burst offerings on Azure enable enterprise organizations to leverage high-scale, dedicated identity infrastructure while maintaining commitment to the Azure ecosystem.

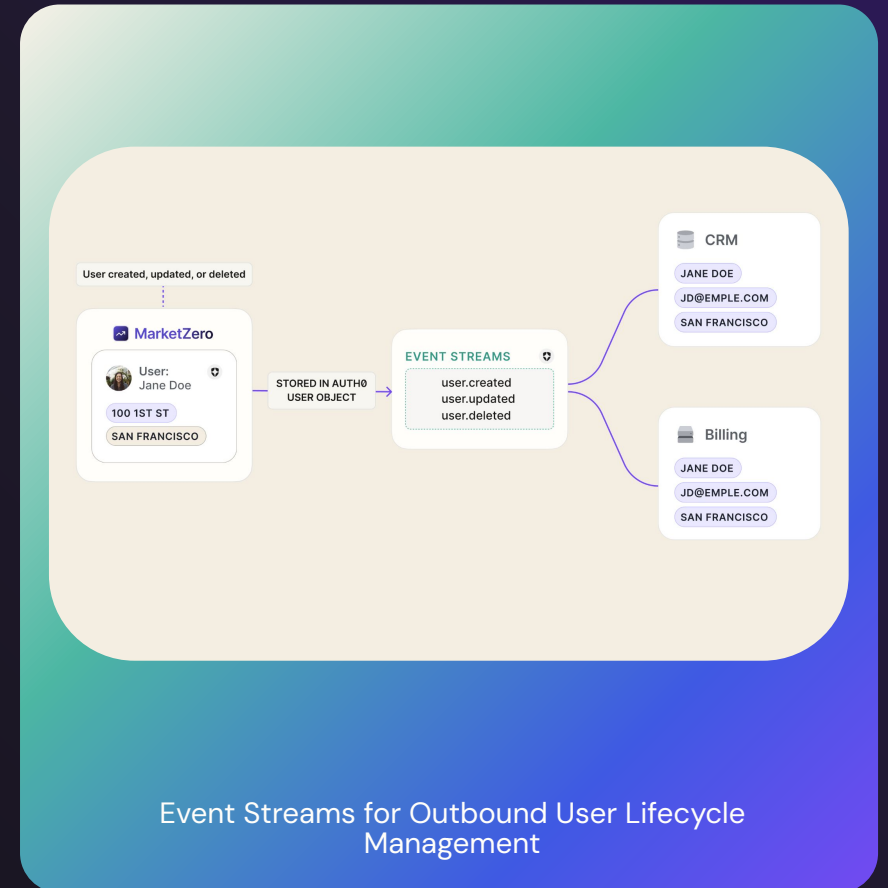

[Learn more](#)

Event Streams for User Lifecycle Management (Outbound SCIM)

Feature of: Extensibility/ Available in: All plans, Advanced Extensibility

Allows developers to subscribe to user lifecycle events via Events API or Event Streams with destinations (e.g., Webhooks, Amazon EventBridge, or Actions)–, and sync identity data across your entire tech stack, such as CRMs, billing systems, and marketing tools.

[Learn more](#)

Platform

General Availability

Actions – Transaction Metadata

Feature of: Extensibility / Available in: All Plans, Advanced Extensibility

Allows developers to define and share metadata between Actions. Developers can define and reuse cross Action variables improving Actions implementation, resources management and performance.

[Learn more](#)

Forms – Flows Auth0 Send Email Action

Feature of: Extensibility / Available in: All Plans, Advanced Extensibility

Allows you to send emails from Flows using the customized Email Provider at your Auth0 Tenant.

[Learn more](#)

Forms – Flows Auth0 Send SMS and Make Call Action

Feature of: Extensibility / Available in: All Plans, Advanced Extensibility

Allows you to send phone messages from Flows using the customized Phone Provider at your Auth0 Tenant.

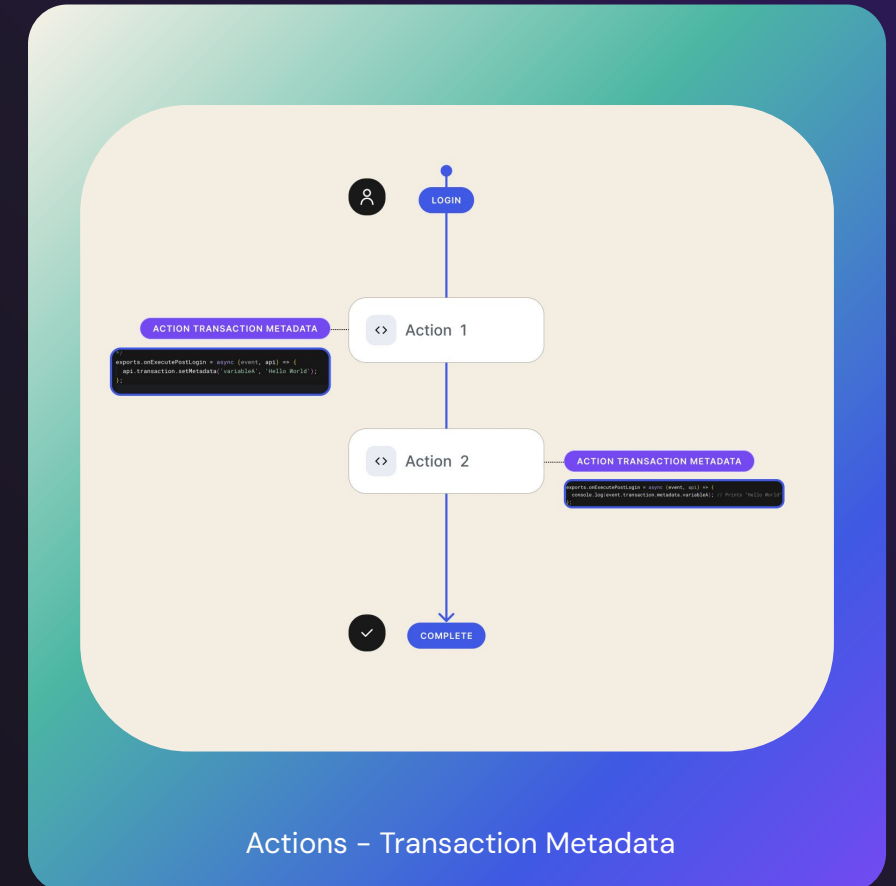

[Learn more](#)

Forms – Flows HTTP Vault Connection Variants

Feature of: Extensibility / Available in: All Plans, Advanced Extensibility

Directly supports OAuth App, Basic Auth, API Keys, and other custom authorization headers for Flows HTTP Request Action.

[Learn more](#)

Platform

Early Access

Actions – Modules

Feature of: Extensibility / Available in: All Plans, Advanced Extensibility

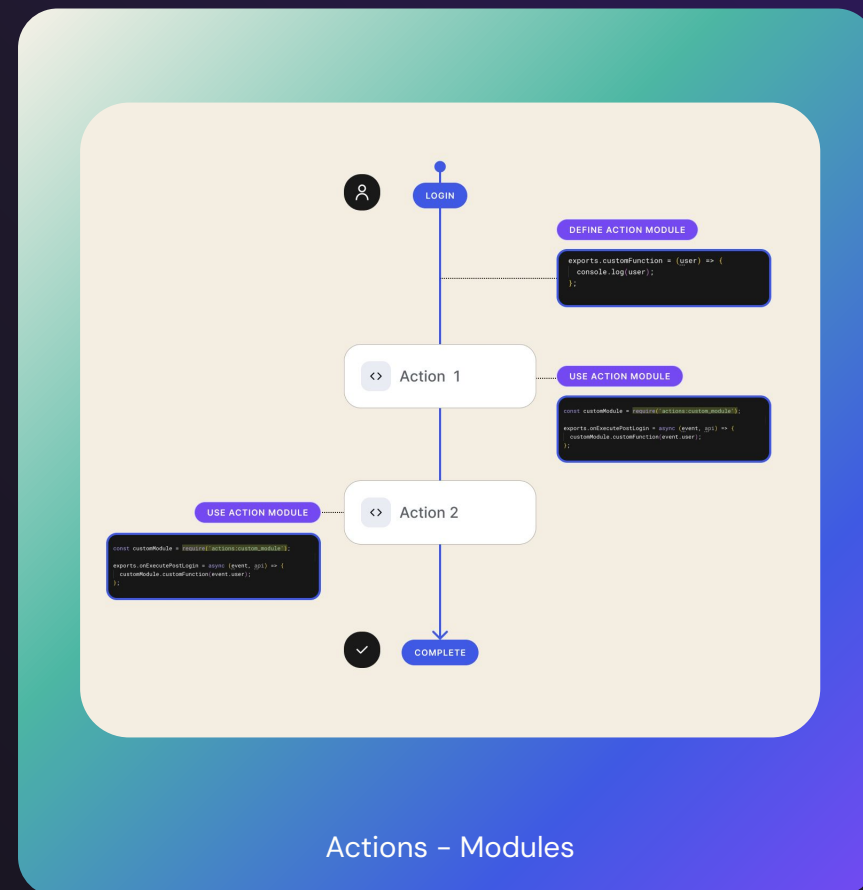

Allows developers to create, manage, and share reusable code across different Actions within your Auth0 Tenant.

Actions – Types NPM

Feature of: Extensibility / Available in: All Plans, Advanced Extensibility

This NPM library currently facilitates TypeScript definitions for Auth0 Actions.

Developer Resources

Auth0

From improving customer experience through seamless sign-on to making MFA as easy as a click of a button — your login box must find the right balance between user convenience, privacy and security.

Identity is so much more than just the login box. Optimize for user experience and privacy. Use social login integrations, lower user friction, incorporate rich user profiling, and drive repeat customers.
