

Okta & Accenture

A foundation for secure innovation

Innovation is your identity. Keep it secure with modern IAM.

Identity lies at the center of your organization’s technology ecosystem. Even with the widespread adoption of AI, identity remains the #1 attack vector.¹ Today, many bad actors begin with compromised credentials and exploit identity-based risks before moving laterally to additional vectors. AI is accelerating these risks while simultaneously creating a new wave of non-human identities that require protection.

This raises a fundamental security principle: Your technology ecosystem is only as secure as its identity foundation. It is the connective fabric that ensures seamless and secure access to key resources, and it is the dynamic barrier that keeps bad actors out in a threat landscape.

Without a unified, consolidated, and strategic approach to identity and access management (IAM), organizations risk siloes and blind spots that leave them vulnerable to everything from catastrophic breaches to everyday inefficiencies.

Together, Okta and Accenture provide a comprehensive solution to help manage and prevent escalating risk factors. Accenture, a leader in cybersecurity services, brings its deep industry expertise, capabilities in Identity and Access Management, and renowned change management and systems integration experience to complement Okta's identity platform. The result is a powerful combination that equips your organization with a robust identity foundation, preparing you for an agile, innovative, and secure future. This collaboration helps ensure that you are not just implementing a new system, but building a foundational and strategic advantage in a constantly evolving digital landscape.

Okta & Accenture

An identity fabric built to perform

Thwart bad actors by sharing signals from the platforms you trust

Stop would-be attackers in their tracks with automation-enhanced detection and response

Prepare your organization for the future of work

Eliminate fragmented systems and tech debt with a consolidated approach that boosts both security and workforce efficiency

Innovate fast (without compromising on security)

Build and onboard AI agents with confidence using governance and lifecycle tools built for non-human identities

Attract and retain customers with unbeatable experiences

Auth0, a part of the Okta portfolio, helps you balance seamless CX with powerful customer security

Secure access for agentic AI

Securely adopt and scale AI-driven solutions using an identity framework to govern what data and systems AI has access to

Control and protect access to your most critical systems

Secure your most sensitive infrastructure and data with modern Privileged Access Management (PAM)

¹Persimo, 2026 State of Identity Security Report

Secure identity. Secure everything.

okta

Proactive Identity Security

Leverage the power of automation to continuously monitor risk, identify security blind spots, and respond to threats in real time

Unified Identity and Access Management

Uphold least-privilege principles across apps and systems with a unified set of governance and lifecycle management tools

Future-Ready Identity Tools

Build, manage, and secure AI agents with identity-powered security that maximizes their power while preventing AI-specific risks

accenture

Accelerators that Shorten Time-To-Value

Accenture's proprietary digital transformation tools and frameworks support faster deployment and more immediate results

Joint Delivery Built Around Your Needs

Our joint delivery model eliminates the friction inherent to change, easing handoffs from development to implementation and beyond

Unmatched Insights that Make Growth Inevitable

Accenture's team of advisors and technical experts ensures that your organization's tech stack is ready for anything—end-to-end

okta | accenture

A Partnership Built on Continuous Innovation

For Okta and Accenture, the partnership is driven by a shared goal of future-proofing organizations, making innovation a two-way street. Together, we provide the essential identity foundation, advanced tools, and critical insights that empower you to scale with confidence, all while delivering secure and seamlessly connected experiences for every user, regardless of industry.

Industry Lens: What Matters Most

- Highly regulated industries: audit-ready access + governance
- Customer-first industries: frictionless sign-in + fraud resistance
- Industrial and infrastructure industries: privileged access + machine identities at scale

“Organizations must be able to focus their resources on making their best product and expanding their reach, not chasing down the latest threat. Okta and Accenture can help them achieve this approach with a unified identity fabric that secures and streamlines.”

– Gabe Albert, Managing Director (Identity & Access Management), Accenture

Take your AI-powered next step (Without compromising on security)

Okta and Accenture help you capture the upside of AI innovation while avoiding the pitfalls, with demonstrable guidance to adopt and scale AI confidently and securely.

Build

Auth0 for AI Agents

Empower developers to build AI agents that are secure by design with intuitive tools and built-in protections

Manage

Agent Identity Lifecycle

Establish full lifecycle management for agents: visibility, access control, governance, and remediation

Connect

Cross-App Access (XAA) for AI Agents

Enable agents to securely connect to systems and applications without granting them unlimited standing access

Detect

Visibility and Governance

Minimize the attack surface with real-time detection and remediation of AI identity configuration risk

Don't let a warped sense of readiness leave you exposed

Only **36%** of tech leaders admit generative AI's rapid rollout is outpacing their ability to integrate security measures²

But **90%** of those same leaders lack the security maturity needed to combat modern threats³

De-risk your leap of faith

The world's most innovative companies, from AI start-ups to Fortune 500s, entrust their identity security to Okta. Together with Accenture's unmatched advisory and digital transformation services, Okta can help your organization blaze a nimble, secure, and powerful trail into your future—one login at a time.

Lay the AI-ready groundwork for what comes next

- Protect innovation and GTM timelines
- Create the foundation for a larger agent ecosystem
- Prepare for a new regulatory landscape

"It's time for identity to move from the perimeter to the center of AI operations. That means treating agents as first-class identities in your security model."
 – Harish Peri, SVP + GM, Okta for AI Agents, Okta
